MJTECH POINT OF SALE

Owner Guide

Set up, run and close your business with MjTech Point Of Sale

For the owner · Bar and Wholesale

Owner login email:

Owner recovery code is kept (where?):

Developer / support contact:

Bar device: _____ Wholesale device: _____

1. What MjTech Point Of Sale does

MjTech Point Of Sale is the till for your **Bar** and your **Wholesale**. Each site has its own device, its own stock, its own sales and its own shift. As the owner you see everything: money in, money out, stock and profit.

It keeps working **without internet**. Everything is saved on the device first and sent to the cloud when the internet is back.

The menu at a glance

Menu item	Who	What it is for
Terminal	Everyone	Sell items, take payment, hold a tab.
Open Bar Tabs	Everyone	Customers who drink now and pay later.
Sales & Refunds	Everyone sees. **Owner refunds**	Find a sale. Give a refund.
Stock Tracking	Everyone sees. **Owner changes**	Stock levels, add and edit products, receive deliveries.
Expenses	Everyone adds. **Owner voids**	Money going out: ice, transport, wages, bills.
End of Day (EOD)	**Owner only**	Count cash and stock, see the day's result, close the shift.
Calendar	Everyone (owner sees profit lines)	Results for each day, month and year.
Analytics & COGS	**Owner only**	Profit, costs, best sellers, hourly sales.
Cloud Sync	Everyone can open it. **Owner / developer sets it up**	Link the device to the cloud and see sync status.
Business details	**Owner only**	Your business name, address, phone, TPIN and the message printed on receipts.
Team	**Owner only**	Staff accounts and roles.

2. First-time setup checklist

Your developer installs the app and the cloud connection. You then do the rest below, once, on each device.

1. **Create the owner account.** On the very first start the app asks you to create the owner account. Use a real email and a strong password. This account can do everything.
2. **Enter your business details.** Tap **Business details** in the menu and type your business name (and, if you want them on receipts, address, phone and TPIN). Do this on each device. Your business name then replaces the logo at the top of the menu and prints on every receipt and report.

3. **Write down the recovery code** your developer gave you and keep it somewhere safe and private. It is the only way to reset the owner password when there is no internet. Never give it to staff.
4. **Add your staff** (see section 10). Give each person their **own** login.
5. **Add your products** (section 4). Enter the correct **price** and **cost**. Profit figures depend on the cost.
6. **Count and enter opening stock** for every product.
7. **Sell one test item**, then check **Sales & Refunds**. Refund it and put it back in stock, so you know the flow.
8. **Open Cloud Sync** and sign in. Check the bottom-left says **All synced**.

> **Sample items**
> A new device may show sample drinks or crates. They are only examples. Edit them with **Edit**, or add your own products.

> **One device per site**
> The Bar device is signed in to **Bar**, the Wholesale device to **Wholesale**. They do not mix stock. You can sign in as owner on either device. To see the other site's figures, sign in to that site's workspace on any device that has synced.

3. Your day at a glance

When	Do this
Opening	1. Sign in. 2. If it says **Shift Closed**: **End of Day → Start New Shift**. 3. Type the **opening float** (the cash you put in the drawer for change) on the End of Day screen. 4. Glance at **Stock Tracking** for low items.
Trading	Staff sell. You: receive deliveries, check tabs, give refunds if needed, make sure expenses are recorded as they happen.
Closing	Follow the 9 closing steps in section 5 exactly. It takes about 10 minutes.
Next morning	Start New Shift. Counted stock becomes the new opening stock.

4. Stock and products

Add a new product (first time you order it)

1. Go to **Stock Tracking → Add New Item**.
2. **Take a photo** with the camera, or **Choose file**. This is optional but helps staff find the item quickly.
3. Fill in the **name**, **SKU / barcode**, **selling price**, **cost price**, **starting stock** and **unit** (pcs, crates, cases…).
4. Set the **low-stock alert** number. The item is flagged when stock falls to this level.
5. Optional: set a **bulk price**. For example "10 or more at K245 each".
6. Tap **Save to Catalog**.

> **Why cost matters**
> Profit = what you sold for − what it cost you. If the cost is wrong or empty, your profit figures will be wrong.

Change a product later

In the stock list tap **Edit** on the item. You can change the photo, name, price, cost, unit, bulk price and alert level. You **cannot** type the stock quantity here (and deleting is a separate step, below). Use **Restock** for deliveries and the End of Day count for corrections. This keeps the records honest.

Delete a product

Use this for an item you no longer sell or one added by mistake. Only the owner sees the delete button.

1. In **Stock Tracking** find the item and tap the **red bin icon** at the end of its row.
2. Read the message. It tells you how many units and how much value (at cost) will stop being counted. Tap **OK** to confirm.

- The item disappears from the Terminal, the stock list and End of Day. It is also removed from the ticket if someone had it there.
- Old sales, refunds and reports keep the item, so your history stays correct.
- The deletion syncs to the other device.
- **Changed your mind?** Scroll to the bottom of **Stock Tracking**, open **Deleted items** and tap **Restore**. The item comes back with the stock it had.

> **Sell or count the stock first**
> A deleted item's remaining stock is no longer counted. If there is still stock on the shelf, sell it or write it off properly before deleting, otherwise that value just disappears from your figures.

Receive a delivery

1. In **Stock Tracking** tap **+ Restock** on the item.
2. Type the **quantity** that arrived.
3. If the supplier price changed, type the **new cost per unit**.
4. Tap **Add to stock**.

Every delivery is saved in **Delivery History**, which you can filter by period or item.

> **Do not record deliveries as expenses**
> The cost of a delivery is already counted when you sell the item. Entering it as an expense as well would count it twice and make your profit look too low.

Bulk (wholesale) prices

When a customer buys at least the bulk quantity, every unit gets the bulk price automatically. Staff do not choose it and cannot change it. At the Wholesale, staff type the quantity (for example 30) in the ticket instead of tapping + many times.

5. Closing the day (End of Day)

Open **End of Day (EOD)**. Do these steps **in this order**.

1. **Finish all sales.** Make sure no customer is waiting to pay. Open tabs may stay open and carry over to tomorrow.
2. **Record every expense** from today (**Expenses** menu). Anything not entered now will not count.
3. **Count the cash** in the drawer. On End of Day type it in **Cash counted in drawer**.
4. **Count the stock** on the shelves. In the **Physical Audit Count** column type what you really counted for each product.
5. **Read the result.** See the table below.
6. Tap **View Full EOD Report**. Check it, then tap **Print** and choose **Save as PDF** to keep a copy, or print on paper.
7. Tap **Close Shift (EOD)**. The app reminds you about expenses and the cash count. Confirm.
8. Take the cash to hand over (the report tells you how much), and lock it away.
9. Check **Cloud Sync** says **All synced** before you leave.

How to read the End of Day screen

Number	What it means
Sales	Everything sold this shift, **after** any refunds.
Expenses	All money that went out (any source).
Net after expenses	Sales − expenses. It does not yet include the cost of the drinks or missing stock.
Cash to hand over	Cash sales − cash paid from the till. This is the cash to take away, not counting the float.
Expected in drawer	Opening float + cash sales − cash paid from the till − cash refunds.
Over / short	Counted cash − expected cash. **Short** means cash is missing. **Over** means there is more than expected. Look for an unrecorded expense or a wrong amount.
Shrinkage	Items that should be there but are not (counted less than the system says), valued at your cost. This is your loss from theft, waste or errors.

Count carefully: it becomes tomorrow's stock

When you **Start New Shift**, the system sets stock to exactly what you counted. If the count is wrong, tomorrow starts wrong. If you are unsure, count again.

After the shift is closed

The register is locked and nobody can sell. You (the owner) can still add a **late expense**. It is attached to the shift that just closed and marked LATE. Refunds need an open shift.

6. Expenses

Staff and owner can both record expenses. Each one has an amount, a category, who it was **paid from**, and an optional name and note.

Paid from	Use when…	Effect
Cash from till	Cash was taken from the drawer.	Counts as an expense **and** lowers the expected cash in the drawer.
Mobile money	Paid from the business wallet.	Counts as an expense. Drawer cash unchanged.
Owner / other	You paid out of your own pocket.	Counts as an expense. Drawer cash unchanged.

Owner tools

- **Void** a wrong entry with the ban icon. Entries are never deleted, only voided, so there is always a record.
- Switch **This shift / Today / 7 days / 30 days / All** to see history and a **category breakdown**.
- Tap **CSV** to download the list for Excel.

7. Refunds

Only the owner can refund, and only while the shift is open.

1. Go to **Sales & Refunds** and find the sale (search by receipt number, item or customer).
2. Tap **Refund**.
3. Set the quantity to refund for each item, or tap **Refund everything**.
4. For each item choose **Put back in stock** (tick) for good items. **Untick** for spilled, damaged or already-consumed items. That cost then stays as a loss.
5. Choose how the money is paid back, pick a **reason**, then tap **Refund**.

- The refund lowers **today's** sales (the money leaves the till today), not the day of the original sale.
- If a discount was given on the sale, the refund is reduced in the same proportion.
- A refund **cannot be undone**. Check before confirming.
- A sale shows **PART REFUNDED** or **FULLY REFUNDED** afterwards.

8. Calendar and Analytics

Calendar

Pick a day, month or year to see sales, cash / mobile / card split, expenses, net after expenses, refunds, cash over/short and shrinkage. Staff see sales only.

Analytics & COGS

Profit & Expenses shows, for **Today / 7 days / 30 days / All**:

- **Revenue** (after refunds) − **Cost of goods** = **Gross profit**
- Gross profit − **Expenses** − **Shrinkage** = **Net profit**
- A **by-day table** and **expenses by category**.

> **Old sales**
> Sales made before the cost was recorded on each sale use the product's **current** cost, so older profit figures are approximate. New sales are exact.

9. Cloud sync and two sites

Status at bottom-left	Meaning
Saved on this device	Cloud is not connected. Everything is safe on the device only.
All synced	Everything has reached the cloud.
N waiting to sync	Saved on the device, will be sent when the internet works.
Offline · N queued	No internet right now. Keep working. Nothing is lost.

- Connect each device to the internet at least **once a day** so your data is backed up and you can see it from another phone.
- If a device is lost or broken, the cloud copy lets a new device pick up the data after you sign in.
- Open **Cloud Sync** to see the last sync time or tap **Sync now**.

10. Team and security

Add or manage staff

Open **Team**. With the cloud connected, new people are created by your developer in the cloud dashboard and then appear in the Team list as **Staff**. You can change someone to **Owner** or back. On a device without the cloud, use **Add account** to create the person on that device.

Good habits

- One login per person. Never let staff use the owner login.
- Change a person's password or remove them the day they leave.
- Staff cannot see costs, profit, End of Day, analytics or give refunds. Tell staff **not to change Cloud Sync settings**.
- Always **Sign out** when you leave a device, at the bottom-left of the menu.
- Keep the **recovery code** private.

> **Never tap "Clear saved data"**
> It is the small link at the bottom of the menu. It erases everything saved on that device that has not yet synced. Only use it if your developer tells you to.

Forgot the owner password

1. On the sign-in screen tap **Forgot password?**
2. With internet: enter your email and the 6-digit code that is emailed to you.
3. Without internet: use the **owner recovery code**. After 5 wrong codes it locks for 10 minutes.

11. Problems and answers

Problem	What to do
A product shows **Out of Stock** but is on the shelf	The system count is wrong. Use **Restock** to add what is missing, or correct it in the End of Day count. Find out why (a delivery not entered?).
The drawer is **short**	Check expenses taken from the till, refunds paid in cash, and sales in Sales & Refunds. Then ask the staff on that shift.
I deleted a product by mistake	**Stock Tracking** → bottom of the page → **Deleted items** → **Restore**.
A staff member made a wrong sale	**Sales & Refunds** → find it → **Refund**.
Cannot sell, says **Shift Closed**	**End of Day** → **Start New Shift**.
Cannot add an expense	Staff cannot add after the shift closes. The owner can add a late one.
Print does nothing	The receipt or report is sent to the normal printer of the device. Check a printer is installed and set as default. To test, choose **Save as PDF** in the print window.
Photo button does not open the camera	Choose **Choose file** instead. Tell your developer to allow the camera permission on the Android app.
Sync stays on "waiting"	Check the internet, open **Cloud Sync**, sign in, tap **Sync now**. If it still fails, call your developer.
The menu seems cut off	Scroll the menu. **Sign out** is pinned at the bottom-left.

Good to know

- Tax is set to 0%. Ask your developer if you need it changed.
- The receipt **Print** button prints an 80 mm receipt through the normal print window. A thermal printer must be installed on the device like any other printer. There is no direct USB or Bluetooth connection yet.
- Your business details are saved on each device. If you use a new device, enter them again.
- Sales, expenses and refunds are never edited or deleted. A mistake is corrected with a refund or a void, so there is always a trail.

Who can do what

Action	Staff	Owner
Sell, hold and pay tabs	Yes	Yes
Record an expense	Yes (shift open)	Yes (also after close)
Void an expense	No	Yes
See sales of this shift	Yes	Yes

Action	Staff	Owner
Refund a sale	No	Yes
See stock levels	Yes	Yes
Add / edit / delete products, restock	No	Yes
End of Day, close / start shift	No	Yes
See costs, profit, analytics	No	Yes
Edit business details	No	Yes
Team accounts	No	Yes
Set up Cloud Sync	Do not touch	Yes

Daily closing checklist (print and tick)

✓	Step
☐	All sales entered, no customer waiting
☐	Open tabs checked and noted
☐	All expenses recorded
☐	Cash counted and typed in
☐	Stock counted and typed in
☐	Over / short and shrinkage reviewed
☐	EOD report saved as PDF or printed
☐	Close Shift (EOD) done
☐	Cash banked or locked away
☐	Cloud Sync shows All synced
☐	Signed out
